ACCESS CONTROL IN A BOX

A convenient, reliable, and cost-effective standalone access control system

The GAO RFID Standalone Access Control System is an access control solution that provides you with the ability to control and secure access to what's important in your business. This standalone system is ready to be installed right out of the box; it does not require any networking or complicated programming.

Product Snapshot

The GAO RFID Standalone Access Control System is an extremely cost-effective way of controlling access to specific zones within your building. It is an "In a Box" solution that includes the software, antenna and all other peripherals such as the digital I/O. These components are interfaced together and embedded right in the box; the system requires no networking or programming and can be installed directly installed at doors and entryways to automate access. With our Access Control Management Software installed on a desktop computer, you can activate and administer badges that are given to your users to access the building. When data exchange and software upgrades are required, this can be accomplished by simply using a USB stick. This results in a compact, convenient, and cost-effective access control solution that can be installed within minutes without the worry of running cables for networking and the perils of extensive programming. Access Control in a Box-- simple, smart, and just works!

Product #617018A shown

STANDALONE ACCESS CONTROL SYSTEM FEATURES

Control and restrict access to zones in the building ✔

24-hour unmanned operation; set it, then forget it! ✔

UHF technology means no swipe cards or passwords--users are quickly identified ✔

Group Management gives the ability to control multiple zones simultaneously ✔

Access History Logs to see who accessed what zone at what time--full visibility! ✔

The option to sync the RFID reader and your Management PC to give real-time data ✔

HOW IT WORKS

BADGE MANAGEMENT →

Add, edit, and remove badges from the system or organize ID badge holders into groups to control access to different zones within your building.

ZONE CONTROL →

When personnel enter the reading range of the doorway, the system reads the badge and authenticates it, granting access to the zone and logging the user entry/exit information into the database.

READER MANAGEMENT →

Access Control readers can be configured using a PC. Additionally, all data stored on the readers can be retrieved, ensuring 100% visibility of the access history to your building.
